Femtosecond/Picosecond Fiber Oscillator

Magellan II™ delivers on the promise of fiber laser technology with performance comparable to diode-bar-pumped Vanadate laser-pumped Ti:Sapphire oscillators – and does so at a fraction of the cost, with much longer lifetime, and substantially lower cost-of-ownership.

Magellan II™ is a fiber-pigtailed, telecom-qualified, direct-diode-pumped oscillator (no intermediate Vanadate pump laser) in a compact “all-in-one-box” enclosure. It can be configured to produce low noise picosecond or femtosecond pulses and has the ease-of-operation, and reliability you expect from a plug-and-play device. Free-space propagating output coupling is standard. Fiber output coupling and/or harmonic generator are optional.

Features
• Yb-doped fiber gain medium ⇒ high stability
• Single-emitter diode pump ⇒ long life
• Compact, all-in-one-box design ⇒ easy to use
• Operates from 1.025-1.035 μm ⇒ ideal for bio applications
• 25 MHz repetiton rate ⇒ longer sample relaxation time
• nJ level pulse energies ⇒ access to nonlinear effects
• Extremely low noise ⇒ high signal-to-noise ratio
• Free-space or fiber output ⇒ flexible delivery
• Optional SHG ⇒ access to visible wavelength

Ideal for
• TPEF
• OCT
• THz generation
• Microscopy
• Photopolymerization
• Amplifier seed oscillator

Performance Parameters
Femtosecond Version
Pulse energy: >1 nJ/pulse
Pulse width: < 200 fs
Average power: 20 mW

Picosecond (Option)
Pulse energy: >2 nJ/pulse
Pulse width: ~ 3 ps
Average power: 60 mW

Amplified (Option)
Pulse energy: ~10 nJ/pulse
Pulse width: < 200 fs
Average power: ~ 200 mW

General
Center wavelength: fixed between 1.025 and 1.035 microns
Transverse mode: TEM₀₀
Repetititon rate: nominal 25 MHz
Beam diameter: 1.8 mm +/- 0.2 mm
Beam divergence: < 2 mrad
Dimensions: 13 x 10 x 6.2 in³
Electrical: 100 - 240 Volts, 2 amps
Picosecond Seed Laser

The ultra short-pulse picosecond fiber seed laser is our latest research result. It is the ideal sources for ultra-short pulse fiber amplifier system, solid travelling wave amplifier system and regenerative amplifier system. We use the advance mode lock technology to produce laser pulse width at around 10 picoseconds. The pulse width can be customized according to the customer’s requirement. With built-in power supply system it is convenient to use it with power input 220VAC.

Features:
- Polarized beam
- High pulse extinction ratio
- Excellent beam quality
- High anti-reflection

Application:
- Picosecond solid travelling wave amplifier
- Seed sources for regenerative amplifier
- Seed sources for ultra-short pulse fiber laser system

STYS series Pico-second Pulsed Fiber Lasers

STYS-10-0.15 Pico-second pulsed fiber laser is a new product recently launched by Sintec Optronics. This ultrafast fiber laser is used for material micromachining. This ps fiber laser uses self-designed highly reliable seed laser which results longer lifetime and higher reliability than the traditional passively mode-locked technique, which makes it ideal for economical ownership and high precision for micro-processing.

Features:
- Gain-switching seed laser
- All-fiber system
- Burst function available
- 10W@500kHz
- Repetition rate: 50-500kHz
- Pulse width: <150ps
- Single pulse energy up to 10uJ
- Beam quality M2<1.3
- Dust Proof design

Applications:
- HB LED chip dicing
- Sapphire substrate dicing
- Glass dicing
- MEMS chip dicing
- Thin film dicing
- LCD repair
- Silicon wafer dicing

STYS-15-0.1 is for cold-processing micro-machining application. With the peak power of up to 60kW, pulse width of 500ps (100ps@5MHz) and burst function, Pico-15-0.1 is the unique fiber laser system for Lion-Battery foil cutting, marking on various metal, hole drilling, ITO and other micromachining application. PicoYL-15-0.1 has the DB25 and USB control functions.

Features:
- <3us Switch on/off
- Pulse width: 500ps (100ps@5MHz)
- Peak power up to 60kW
- Burst function available: 1~16
- Simmer function

Application:
- Lion-Battery Foil Cutting
- Metal Marking
- ITO Removing
- CIGS Marking
- Thin-film removing

STFC-Femto series

Our STFC-Femto-25 is a series of powerful industrial femtosecond pulse width lasers offering output powers up to 25 W for high throughput, high quality micromachining. The FEMTO series provides high pulse energies up to 150 μJ of typically 800 fs pulse width at repetition rates selectable between 100 kHz and 2 MHz. The FEMTO series is the only ultra-fast lasers available utilizing the revolutionary Taranis Single Crystal Fiber (SCF) amplifier construction which enables higher energy per pulse, more widely variable repetition rates without the need to lower energy, improved beam quality, more effective smaller packaging.

STFC-Pico series

Our STFC-PICO is a series of powerful industrial lasers. It emits picosecond pulses (<10 ps) with excellent beam quality, in a compact package. The PICO series uses the well proven Taranis Single Crystal Fiber (SCF) technology for greater design simplicity, ruggedness and adjustable parameters. This laser tool is designed for micromachining. It can be operated at user selected repetition rate ranging from 200 kHz to 2 MHz depending on the process needs. By selecting the repetition rate, the user can favor pulse peak power above 10 MW or average power up to 60 W, while keeping high and constant beam quality. The PICO series is available at three average power levels: 12 W, 35 W and 60 W.

STNL Helix Series Fiber Lasers

STNL Helix picosecond fiber laser is the industry’s first cost-effective solution for high precision micro-materials processing. Designed to meet the highest quality and reliability standards for maintenance-free 24/7 industrial operation, the air-cooled system provides a near-diffraction-limited, high peak-power, short pulsed beam at 1064 nm. The small footprint of the laser head coupled with an intuitive user interface allows for ease of integration into any laser machine tool.

The platform leverages industry-leading diode and fiber technology to deliver a high-performance pulsed fiber laser solution:

- High brightness, ultra-reliable fiber-coupled diodes
- Fiber provides unmatched beam quality and stability capable of achieving multi-hundred kW peak power
- Proprietary seed technology that enables ultra stable, configurable pulses with highly flexible parameters including burst mode, pulse duration and repetition rate

This fiber laser platform is designed and manufactured to meet the high performance and high-reliability requirements of 24/7 industrial production.

Features
- Burst mode
- Burst shaping
- High peak power (300 kW)
- Configurable pulse widths from 50 ps to 400 ps
- User selectable repetition rates from 50 kHz to 10 MHz
- Air-cooled
- Flexible modular design enables high user uptime
- Near diffraction-limited beam

Applications
- Sapphire scribing
- Stealth dicing
- Glass processing
- FPD processing
- Flex circuit patterning
- Semiconductor processing
- Marking and engraving

STOF-PL Series Laser Diode System

STOF-PL series Picosecond gain switched laser diode module for OEM and R&D applications.

Features:
- High pulse quality – no satellite pulse and minimized pulse tail
- Variable pulse repetition rate – single shot to 100 MHz
- Pulse on demand
- Wavelengths from 375 – 2000 nm
- High repeatability and 24/7 operation
- Compact, dust-sealed OEM package
- External and internal trigger
- Simple user interface
- Plug & play
- Air cooled
- Remote control
- Maintenance free – no user-serviceable parts inside or outside laser

STOF-GK series Pico-second Lasers

STOF-GK series low-noise picosecond laser module designed for OEM and R&D applications.

Features:
- Pedestal-free high quality pulses
- Clean and narrow optical spectrum – no ripple
- Very low amplitude and phase noise
- No amplifier built in – no ASE noise
- Diffraction limited beam
- High repeatability and 24/7 operation
- Compact, dust-sealed OEM package
- Plug & play
- Passively air cooled – no water cooling
- Low power consumption
- Remote control
- One-button operation – no adjustment knobs or screws
- Maintenance free – no user-serviceable parts inside or outside laser

STOF-KT Series High Power Pico-second Lasers

STOF-KT versatile high power picosecond laser module designed for OEM and R&D applications.

Features:
- Variable pulse repetition rate
- Pulse on demand / burst mode
- High pulse quality
- Narrow optical spectrum
- High repeatability and 24/7 operation
- Compact, dust-sealed OEM package
- Air cooled
- Remote control
- Plug & play – one-button operation no adjustment knobs or screws
- Maintenance free – no user-serviceable parts inside or outside laser

STOF-OG Series Femto-second Lasers

STOF-OG ultra-low-noise solution femtosecond laser module designed for OEM and R&D applications.

Features:
- Excellent pulse quality – pedestal-free transform-limited soliton pulses
- Clean sech²-shaped optical spectrum
- No Kelly-sidebands – no spectral ripple
- Diffraction-limited beam quality
- Lowest phase noise and timing jitter available on market
- Shot noise limited relative intensity noise
- No amplifier built in – no ASE noise
- High repeatability and 24/7 operation
- Compact, dust-sealed OEM package
- Plug & play
- Passively air cooled – no water cooling
- Low power consumption
- Remote control
- One-button operation – no adjustment knobs or screws
- Maintenance free – no user-serviceable parts inside or outside laser

Technical data (STOF-OG-10 XP):

1 exact size and weight depend on pulse repetition rate
IMPULSE™ High-Average-Power Femtosecond Laser

Features:
- Direct diode-pumped Yb-fiber oscillator/amplifier design
- All-diode-pumped, all-solid-state construction
- Robust, one-box design
- >20 watts average power
- Repetition rate user-selectable from 200kHz to 25MHz
- High beam quality
- Low noise, cw-pumped
- High stability and longevity
- Complete computer control including iPhone/iPod App
- Ideal for: Micromachining, Photo polymerization, Direct-write waveguides, High S/N pump/probe, OPA/NOPA pumping

IMPULSE™ is an all-diode-pumped, direct-diode-pumped, Yb-doped fiber oscillator/amplifier system capable of producing variable pulse energies up to 10μJ with user-selectable repetition rate between 200 kHz and 25 MHz. With 20 watts average power output at 2MHz, IMPULSE™ offers more than an order-of-magnitude higher power than has traditionally been available in a one-box ultrashort pulse laser design.

IMPULSE™ is based on a revolutionary new concept in mode-locked oscillator/amplifier technology. The Yb-doped fiber oscillator/fiber-amplifier design combines the low noise performance of solid-state operation with high spatial mode quality of fiber lasers.

IMPULSE™ is a compact, robust, one-box source of femtosecond to picosecond pulses with the ease-of-operation, stability and reliability you expect from a fiber source. All major parameters are computer controlled, enabling easy interface to workstation or experiment. IMPULSE™ is even iPhone/ iPod² App enabled.

Optional accessories include multi-photon photo-polymerization, waveguide writing, micromachining, harmonic generation, and OPA/NOPA wavelength conversion for high S/N and rapid data acquisition in pump/probe experiments.

Performance Parameters:
- Average power output: User adjustable via embedded computer up to 20 watts at ≥2MHz repetition rate
- Repetition rate: User adjustable via computer from 200kHz to 25MHz (in increments of oscillator repetition rate divided by a whole number¹)
- Pulse energy: User adjustable via computer from 100nJ to 10μJ (eg., >0.8μJ at 25MHz, >10μJ at <2MHz)
- Pulse width: User adjustable via computer between < 250fs and >8ps
- Transverse mode: TEM00
- M² <1.2-1.5 depending on pulse energy
- Noise: <1%rms
- Center Wavelength: 1.03 microns
- Electrical: 220VAC (110VAC Optional), 20 Amps
- Head dimensions 103Lx62.5Wx26H cm³
- Control cabinet 123Hx53.5W x81D cm³

Remark:
1 Optional pulse picker available to additionally adjust repetition rate in the range of 200kHz to single shot.
2 iPhone and iPod are Trademarks of Apple Inc.
Model cOPA™ Fully-Integrated Tunable Ultrafast Source for Microscopy Applications

- All diode and direct diode-pumped
- No intermediate laser-pumped laser needed to pump either oscillator or amplifier stage, thereby improving reliability and performance, reducing cost-of-ownership
- All solid-state construction
- Entire optical system occupies one enclosure to minimize drift
- Computer-control of all major functions via controller touch screen
- Remote control and monitoring via Apple iPhone/iPod App¹
- One year warranty on entire system including nonlinear crystals

The Model cOPA™ is a unique, three-beam source of ultrashort pulses at MHz repetition rate that operates in the 1-micron wavelength range. It is an ideal source for high repetition rate, 4-wave mixing experiments such as 3D multimodal imaging microscopy in cells and tissue. All three beams are synchronized to less than 10 femtoseconds. Two beams are independently tunable. At more than 100nJ/pulse, the Model cOPA™ provides enough energy to perform multi-modal microspectroscopy followed by ablative sectioning of tissue samples.

The Model cOPA™ consists of two synchronized optical parametric amplifiers (OPAs) in one enclosure pumped by our Model IMPULSE™ MHz repetition rate, fiber laser oscillator/amplifier system². Each OPA is independently tunable from 700 to 950nm in the signal range and from 1130 to 1300nm in the idler range. Residual 1030nm pump light of >1μJ is available from a separate output port. Motorized drives for electronic tuning are included. An optional wavelength extension is available providing tunability from 1125nm to 1950nm.

Specifications
- Tuning Range: 700-950nm (Signal) 1130-1300nm (Idler) (>100nJ/pulse throughout signal range)
- Pulse Energy: >100nJ (Signal) >80nJ at peak (Idler) (Over entire signal tuning range)
- Bandwidth: <150cm⁻¹ (200cm⁻¹ to 250cm⁻¹ available at higher power output)
- Repetition rate: 1MHz
- Compressibility: <1.5 x transform limit
- Pulse Energy Noise: <1% rms for f>2Hz
CPA-Series Ti:Sapphire Ultrashort Pulse Laser

- Drift-free, NO TWEAK™ performance
- Smallest footprint in the industry
- Transportable
- Fully-integrated plug-and-play design
- Built-in computer control with embedded .Net DLL files accessible from LabView, MatLab (R2009a & later), C#, VisualBasic
- Apple iPod Touch with iLase CPA client app for remote operation and monitoring
- Built-in electronic shutter for “pulse-on-demand” delivery of single or multiple pulses up to 64,000
- Over 10,000 hours of proven utility in micromachining applications
- Ideal for
  - Pumping OPA (NOPA, TOPAS)
  - Nonlinear spectroscopy
  - Micromachining

Our field-proven CPA-Series Ti:Sapphire lasers redefine user-friendliness in a low cost-of-ownership source of ultrashort pulses of light. It is a complete, fully-integrated, ultrashort pulse oscillator/amplifier system controlled by an embedded touch-screen computer or from any Windows-based computer with a network connection. The included software provides control of laser performance parameters such as power output, pulselwidth, pump power, timing, and selection of single pulse or groups of multiple pulses. A suite of diagnostics is also included to monitor laser performance. The simple, intuitive, user-friendly interface provides both status information and control from external devices such as the included Apple iPod Touch preloaded with our iLase CPA software app. Resident .Net DLL files allow interfacing with your existing application-specific, custom software (LabView, MatLab, VisualBasic, etc.)

The Model CPA-Series provides the best of both worlds by combining the long life of telecom-qualified single-emitter pump diode with the low cost of operation of a single cw lamp. The result is a laser with the lowest cost of ownership on the market today. It is fully compatible with our NOPA series of optical parametric amplifiers providing tunable sub-50 fs pulses, TOPAS series of OPAs, STORC Harmonic Generators, and ShapeShifter™ ultrashort pulse nonlinear spectrometers (transient absorption, pump/probe, CARS, surface-specific SFG, SHG, THG, etc.)

Pulsewidth: <150fs
Wavelength: 775nm
TBWP: <1.4 x transform limit (sech²)
Polarization: Linear, horizontal
Aspect Ratio: 100:1
Transverse mode: TEM00
Energy stability: <1%rms
Beam diameter (FWHM): 4 – 6mm
Beam divergence: <100 microradians

### Additional Output Options:

Amplifier pump laser: Up to 10mJ/pulse at circa 200ns pulselength at 532nm
Oscillator wavelength: Average power output >10 mW at 1550nm or >3mW at 775nm at nominal repetition rate of 30MHz

**Picosecond Option for CPA-2101:**

Pulse energy: >0.6mJ at rep. rates ≤1kHz Linewidth: <8cm⁻¹
TBWP: <1.2 x transform limit (Gaussian)

**Physical Dimensions:**

Laser head: 48” L x 20” W x 12” H
Power supply: 28” H x 23” W x 38” D

**Utility Requirements:**

Electric: 110 VAC, 60 or 50 Hz, 10 A and 208 VAC, 60 or 50 Hz, 40 A
Water: Tap water, 4 gpm, 15-20°C, 30-50 psi

**Warranty:**

Oscillator parts, including the diode laser, are warranted for 40,000 hours or five (5) years, whichever comes first. Please contact us for further details.

iNOPA™ Non-Collinear Optical Parametric Amplifier

- Optimized to be pumped by the Clark-MXR Model IMPULSETM Yb-doped Fiber Oscillator/Amplifier
- Oscillator/Amplifier
- Pulses as short as 14 fs¹
- Near TEM00 output mode
- Compact, user-friendly design
- White light continuum-seeded for high stability

iNOPA™ is a white light continuum-seeded, non-collinear, optical parametric amplifier capable of generating extremely short pulses when pumped by the Model IMPULSETM Yb-doped Fiber Oscillator/Amplifier. To generate short pulses the output beam of the Model IMPULSETM laser is split into two beams inside the Model iNOPA enclosure. One beam is used to generate an extremely broad continuum seed beam which is then amplified by the second, higher intensity beam from IMPULSETM in a BBO crystal operated in a non-collinear arrangement. Non-collinear amplification preserves the very broad linewidth of the seed beam, which can then be compressed to a pulsewidth as short as 15 fs in a prism compressor. Non-collinear amplification is preferred since the resulting pulsewidth is dependent only on the bandwidth of the seed and not on the pulsewidth of the pump laser. In fact, conversion efficiency is improved by having a longer, rather than shorter, pump pulse because the there is more overlap in time between the two beams.

Specifications when pumped with 10μJ/pulse from a Model IMPULSETM
Pulsewidth: <40fs (deconvolved)
Repetition Rate: 1MHz (other repetition rates available as options)
Tuning range: 650nm to 950nm and 1100nm to >1300nm (other tuning ranges available options)
Pulse energy: >250nJ/pulse at peak of tuning range
Noise: <1%rms for f >2Hz
Polarization: Linear, horizontal

General
Size: 15"W x 32.5"L x 9"H
Electrical/Water: None

Model UMW-Series
Ultrafast Micromachining Workstation

- Fully-integrated system including
  - Field-proven laser source technology (Model CPA-Series)
  - Multi-axis positioning system
  - Beam delivery system
  - Selection of processing parameters
  - Class I enclosure
  - Integrated, intelligent, on-axis machine vision and inspection system
  - Motion control
- Pulses “on-demand” (1, 2, … 64,000 at user-selectable repetition rate 1)
- Optional digital and/or analog IO
- Complete computer control
- Granite base mounted on pneumatic vibration isolators
- Small footprint

Over twenty years experience with ultrashort pulse lasers combined with hundreds of real world projects and years of processing knowhow have led to our latest generation of femtosecond micromachining workstations. The Model UMW-Series encompasses everything you need to micromachine with ultrashort pulse lasers. This design benefits from our years of experience learning the optimum combination of components, performance parameters, and software required to micromachine materials with ultrashort pulses of light. The Model UMW Series provides ample space for custom beam delivery and manipulation, and includes a sophisticated machine vision and inspection system, and complete computer control. The software interface provides powerful and intuitive access to all system functionality including the laser, motion, and machine vision systems, and provides advanced intercommunication between them.

1. TTL-0,+1 ΔT = 1/repetition rate
2. Values are for the base system. Other configurations are available upon request.
3. Resolution is for maximum magnification and depends on focusing objective; FOV is for minimum magnification.
ShapeShifter™ is a state-of-the-art research tool that can be configured to perform experiments using many different types of nonlinear processes. It is designed, fabricated and tested using field-proven components from a single manufacturer, thereby minimizing your technology adoption risk.

ShapeShifter™ is capable of meeting your current needs while retaining the flexibility to add options that include pulsewidth as short as 15fs, a large range of pump and probe wavelengths (e.g. sub-200 nm to beyond 10 microns) with decay times ranging from sub-30 femtoseconds to nanoseconds, and at user-selectable repetition rates that are variable from single-shot to multiple kHz. It can be used to explore heat-affected-zone and embrittlement-free structuring in a wide variety of materials using pulse widths that are variable from 30fs to 10ps.

ShapeShifter™ begins with the field proven Model CPA-series patented, fiber-oscillator- seeded, Ti:Sapphire amplifier. The output beam of the Model CPA can be split into as many as seven beams to pump as many as seven tunable, non-collinear OPAs (NOPAs). Or you can use one beam to generate multiple continua and/or you can microstructure materials to create features smaller than 1 micron. Clearly, ShapeShifter™ is the ideal tool for a user facility.

Why limit your future options when ShapeShifter™ offers you unmatched flexibility to go where your research takes you?

Only an introduction to ShapeShifter™ can be provided here due to space limitations. Please contact us to find out how ShapeShifter™ can be configured to meet your specific needs.

1 May require some additional components. Please contact us for more information.
